

Weco Managed On-site Inventory

Budget pressures never go away. In the manufacturing industry, sourcing single components is no longer a cost or time-effective option for bottom line results. Instead, a finished-product solution with proactive Supply Chain Management is far more efficient in terms of total product cost to market.

Current market trends data confirms the transformational effects of standard sourcing and stocking finished goods. With lower cost structures, increased buying power and advanced production technology and capacity, it's no surprise the vast majority of OEMs are reaching out to custom manufacturers like Weco as a strategic partner.

To optimize your Supply Chain performance, Weco offers managed 'On-Site Inventory' to provide a single inventory control point. Weco eliminates inventory stockouts and excesses while centralizing and shortening the supply chain for a dramatic savings in both time and cost.

Since 1952, Weco Manufacturing has been evolving and growing at the speed of business. From our start-up roots to today's sophisticated capabilities, Weco is known for on-time quality work, no matter what size project.

Weco offers complete single-source solutions, design-to-finish as well as complete 'On-Site Inventory' management. As your strategic partner, we provide the Lowest Cost to Market possible for all finished good products. .
